

AllCity Wireless Passpoint / HotSpot 2.0

Seamless and secure “on-the-go” connection to Wi-Fi® hotspot networks.

AllCity Wireless Passpoint / HotSpot 2.0 is a secure solution designed to deliver streamlined user connectivity without the need to search for and authenticate each time a user connects.

Passpoint / HotSpot 2.0 Features

- Automatic network discovery and selection
- Simplified online sign-up and instant account provisioning
- Seamless network access and roaming between hotspots
- Enhanced WPA2™-Enterprise and WPA3™

Passpoint is natively supported by major mobile operating systems such as iOS, Android, macOS, and Windows 10.

Passpoint / HotSpot 2.0 Benefits

- Seamless authentication
- Superior resource management
- Enterprise-level security
- High performance

AllCity Wireless Passpoint / HotSpot 2.0 delivers a better user experience in challenging network environments.

Passpoint / HotSpot 2.0 FAQ

What does Passpoint mean for end-users?

Passpoint delivers a better Wi-Fi user roaming experience. Streamlined authentication and enhanced security provide a quick and worry-free connection.

What does Passpoint bring to hospitality?

Hospitality chains with a single rewards program can consolidate integration on to one single SSID. There is no need for a separate rewards program SSID.

How does Passpoint support service provider branding and customer relationships?

Passpoint supports deployments where a click-through screen is essential for acceptance of terms and conditions or branding.

Can existing equipment be upgraded for Passpoint?

The hardware and software platform of a given device determines whether it can be upgraded in the field.
